

Members of the Group and their contributions:

Serge Ishimwe was in charge of role 1 which involved the Core Architecture & Class Design Responsibilities:

-
- Design and implement RecyclingCentre, Location, Material classes
-
- Establish class relationships (composition, inheritance)
-
- Implement core data structures (List<RecyclingCentre>, Set<Material>)
-
- Create the SpecializedCentre subclass for polymorphism
-
- Ensure OOP principles are properly applied

Key Deliverables: All core classes with proper encapsulation, inheritance hierarchy

Martha Naa Okailey Afful was in charge of role 2 which involved the Search & Algorithm Logic

Responsibilities:

- Implement distance calculation algorithms
-
- Build search/filter logic for finding centres by material
-
- Create sorting mechanisms by proximity
-
- Handle input validation and data integrity
-
- Optimize search performance

Key Deliverables: Fully functional search, sort, and distance calculation systems.

Yaw Nyarko Anim Firemping was in charge of role 3 which involved Data Management & System Integration

Responsibilities:

- Implement file I/O for loading centre data from CSV
-
- Build the RecyclingLocator manager class
-
- Handle data parsing and object creation from files

-
- Integrate all components into a working system
-
- Manage exception handling and error cases

Key Deliverables: Data loading system, integrated working prototype.

Claire-Elise Afia Akyaa Addo was in charge of role 4 which involved User Interface & Testing

Responsibilities:

- Design and build console UI/menus
-
- Handle user input/output formatting
-
- Create comprehensive test cases
-
- Write documentation and user guide
-
- Prepare demo scenarios and ensure system reliability

NAME	SCORE(/10)
Serge Ishimwe	10
Martha Naa Okailey Afful	10
Yaw Nyarko Anim Firempong	10
Claire-Elise Afia Akyaa Addo	10
